Exercise

Exercise

- 1. What is the multivariate normal density $\mathcal{N}(x|\mu, C)$?
- 2. Suppose X,Y are two real-valued random variables.
 - (a) What is the formula for the covariance Cov(X, Y)?
 - (b) What is the formula for the correlation $\rho(X,Y)$?
- 3. Suppose you can generate $\mathcal{N}(0,1)$ random variables. Give an explicit formula for generating a sample from $\mathcal{N}(\mu,C)$ where $C=AA^{\mathsf{T}}$.

Solution

$$\frac{1}{((\mu-x)^{1-\sqrt{1}}|\gamma|^{1/2}}\exp\left(-\frac{1}{2}(\mu-x)^{\frac{1}{2}(-1)}\right)$$

(a)
$$\operatorname{Cov}(X,Y) = \mathbb{E}(XY) - \mathbb{E}(X)\mathbb{E}(Y) = \mathbb{E}((X - \mathbb{E}X)(Y - \mathbb{E}Y))$$

$$(b) \quad \rho(X,Y) = \operatorname{Cov}(X,Y)/(\sigma(X)\sigma(Y))$$

.(TAA,u)
$$\mathcal{N}\sim \mu+ZA$$
